

# Order Mathopedia as a Student Textbook!!

Allow every student to  
have access to precise  
easy-to-understand information.

When using *Mathopedia* as a student text,  
take advantage of the encyclopedia format.

Perfect-bound books can be ordered  
and used with or without consumption.

## STUDENTS USE THEIR BOOKS LIKE THIS:

1. Use *Mathopedia* just as college students use their texts. Write anything in the book that your teacher asks you to write. Use a highlighter to mark the important steps that your teacher asks you to mark. There is space on the back of each page to make a drawing and space to work out several example problems. **DO NOT WRITE ANYTHING ELSE IN YOUR BOOK.** Your eyes will not focus on the key math concepts if you make other marks in this book. Only mark what your teacher asks you to mark.
2. When the teacher begins a new lesson, use *Mathopedia* to learn important points and math tricks.
3. Use *Mathopedia* as a reference at any time. Look up skills in the Index or Table of Contents. Use your sample problems as a guide to do your homework or study for tests.
4. Always keep your book available from year to year and use your *Mathopedia* pages as a reference in the upper grades. Always use the same procedure that you learned to perform the math skills.
5. You will remember your math skills and perform well on state assessment tests by over learning the tricks and condensed important points in *Mathopedia*.
